Altezza/height	cm.	105
Peso/weight	Kg.	85
Motore/power	HP	0,25
Velocità lavoro/work speed	Mt/min.	~18
Luce incollatura/gluing space	mm	500

Gluing machine for adhesive application from below on materials that are not perfectly flat up to a width of 500 mm. Application is carried out by the soft roller on lower part of the machine, and with the guide installed, partial edge gluing is possible.

Suitable for neoprene, and PU adhesives with activators (if equipped with gear pump) and all solvent based adhesives in general. Standard version on base . Electronic speed variator available.

This machine can be connected to the 2C model containers on request for supply without having to pour the adhesive from one tank to another. Rollers with various degrees of softness and surface finishes are available. Also available are brush rollers for gluing shanks and other materials with noticeable thickness difference, plus other modifications for special gluing operations.

The gluing and drive rollers are rapidly and easily removed. The machine can be equipped with a fume extractor hood.
