

מכונת גירוד דגם ST-99-2

**TECHNICAL DATA :**

The rough-scouring machine ST99/2 anti-fire has been designed and developed to do scouring workings and sole, heel and shoe-bottom roughing in order to facilitate and to increase the strength of the mastic or of the glue during the shoes mounting.

The machine is endowed with one main motor, with double shaft Ø 30 mm., and two different selectable speeds (1400-2800 rev./min.).

This particular model is equipped with two independent suction motors that You can activate from the control panel.

The main characteristic of this model is the anti-fire device which is composed by whirls properly designed to keep separated possible fire causes (such as sparks, white-hot nails, and so on...) from inflammable dusts.

Even if the system is very reliable; it is not unfailling and it does not ensure the total immunity to the fire problem although the possibilities are reduced to the minimum.

By request it is at disposal the version with INVERTER.

The machine is manufactured following the CE Standards.
